Aggregate functions

16 December 2021   09:13

1.Who gets max salary
#we can use = here since it only returns one value in aggregate function

Select ename from emp where salary = (select max(salary) from emp)

2.How many employers earn more than employee 1

Select ename from emp where salary > (select salary from emp where eno = 1)

3.Which employ do the same job as employee no.2

Select ename from emp where designation = (select designation from emp where eno = 2)

4.Which employee from delhi do the same job as employee no.2

Select ename from emp where designation = (select designation from emp where eno = 2) and deptno in (select deptno from dept where loc = delhi)
